

Coliform/*E. coli* Test Kit

Microbiological Early Detection Test

Detect Risks. Act with Confidence.
Safer Water Starts with Knowledge.

- Early indication of faecal contamination
- Qualitative screening for informed decision-making
- Support for proactive risk management
- For decentralised monitoring programmes

Aligned with WHO
Drinking Water
Guidelines

DETECT RISKS BEFORE THEY BECOME PROBLEMS.

Water suppliers and field teams need a reliable testing tool to identify potential microbiological contamination before it impacts consumers.

A water source may look clear, but invisible contamination can put entire communities at risks.

The Lovibond® Coliform / *E. coli* Test Kit provides clear results, helping users recognize potential risks early and determine whether actions are required.

Easy to perform, easy to interpret

Blue-green colour indicates coliform bacteria, while UV fluorescence reveals the presence of *E. coli*.
